

EVO55-P systems are unique professional portable sound reinforcement systems that offer excellent modularity and versatility.

The very compact 4-element array cluster (smaller than a typical 15" 2-way loudspeaker) will always deliver SPL and coverage beyond the physical size of the system, while it can be rigged and operated with minimal logistical resources. It can be pole mounted, stacked and flown very easily by only one operator.

EVO55-P features HF assembly with a 1.75" compression driver and a proprietary wave-guide design and a dual-5" woofer configuration for the LF section.

These premium-quality, high-performance European transducers and a dedicated passive crossover filter allow for a natural, linear response throughout the useful frequency range spectrum without any processing of the system.

The integrated weatherized steel rigging structure and stacking, transport and rigging accessories make **EVO55-P** a really plug-and-play system.
